Introduction

01 System Overview

A comprehensive console-based application developed in C to manage hospital operations efficiently.

02 Core Objective

To streamline administrative tasks such as patient registration, doctor scheduling, and billing processes.

03 Data Management

Utilizes structured data and file handling to ensure persistent storage of patient and medical records.

04 User Interface

Features a simple, menu-driven interface designed for ease of use by hospital administrative staff.

Key Features

01 Patient Admission

Comprehensive registration including ID, age, gender, and specific ward/bed assignments.

02 Doctor Management

Maintain detailed records of medical staff, their specializations, and contact information.

03 Billing System

Automated calculation of room charges, medicine costs, and doctor fees with discount logic.

04 Data Persistence

Robust file handling using binary files to ensure data is saved and loaded across sessions.

System Modules

Patient Care

- Admit Patient: Capture ID, age, gender, treatment.
- Bed Allocation: Assign ward and bed numbers.
- Patient List: View admitted patients.
- Doctor Assignment: Link patients to doctors.

Staffing

- Add Doctor: Register medical staff.
- Specialization: Track expertise and contacts.
- Doctor List: Maintain staff directory.
- File Storage: Save staff records.

Financials

- Billing: Calculate stay and treatment costs.
- Service Charge: Apply automatic 5% charge.
- Discounts: 10% off over 50,000.
- Reporting: Generate cost breakdowns.

System Output Screen

```
        Hospital Management System

1. Admit Patient
2. Patient List
3. Add Doctor
4. Doctor List
5. Billing
6. Assign Doctor to Patient
7. Exit
Enter your choice: _
```

Conclusion

PROJECT IMPACT

The Hospital Management System demonstrates how C programming can address administrative challenges, providing a dependable foundation for data persistence and operational workflows.

FUTURE ENHANCEMENTS

Upcoming work will target a GUI, real-time database integration, and multi-user networking to support larger hospital environments.
